

ADVANCED REPORTING SOLUTION FOR RSA AUTHENTICATION MANAGER

Enables organizations to gain enhanced visibility into the RSA SecurID Environment

AT A GLANCE

Integration of RSA Archer and RSA Authentication Manager, the server behind RSA SecurID

- Robust reporting and monitoring tools leveraging the RSA Archer product to deliver RSA Authentication Manager data

Highly Configurable Reports and Graphical Dashboards

- Codeless creation and configuration of custom reports and graphical dashboards

Automated Insight

- Provides actionable intelligence required to monitor and maintain organizational token security
- Automated Notifications

OVERVIEW

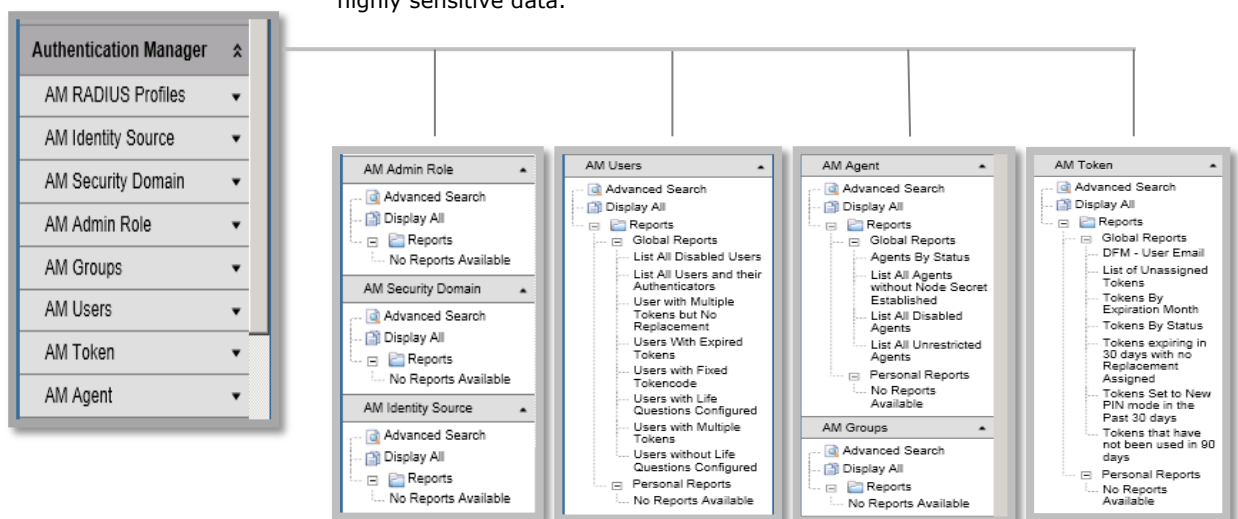

Real-time visibility into the lifecycle state and status of an organization's RSA SecurID® environment is an ever increasing challenge for RSA SecurID Administrators. The organizational IT security landscape is constantly evolving and expanding due to the proliferation of unmanaged mobile devices, uncontrolled access points and web portals. Administrators must have visibility into their RSA SecurID environment in order to ensure access to secure information is protected.

No two organizations are the same and neither are their reporting needs. RSA SecurID Administrators must be able to track and monitor the security credentials of hundreds and in many cases thousands of tokens, agents, and users as they interact with sensitive data from a multitude of platforms, mobile devices, and web portals.

ADVANCED REPORTING SOLUTION

To meet these challenges and address the needs of RSA SecurID Administrators, RSA has developed a new robust reporting solution, leveraging the RSA Archer platform, which will enable administrators to quickly and easily gain visibility into the status and usage of authenticators, users, agents, and more.

The Advanced Reporting Solution provides a highly configurable, reporting platform that enables SecurID administrators to create their own reports using a code-free graphical user interface (GUI). Administrators can use the GUI to set criteria-based notifications - notifications will appear on the Administrator's dashboard when the set notification criterion has been met. Organizations no longer have to enlist the services of software developers or leverage costly third parties to create reports and dashboards necessary to make informed business decisions in order to keep the organization safe from unauthorized access to highly sensitive data.

DATA SHEET

TECHNICAL SPECIFICATIONS

- RSA Archer 5.3.1 or higher
- RSA Authentication Manager 8.1 or higher

REPORTING AND DASHBOARDS

In addition to the standard reports with the RSA SecurID solution out of the box, the Advanced Reporting Solution offers 20+ new reports and dashboards, in addition to the ability to create customized reports and dashboards. Using the GUI, reporting and dashboard attributes, user access, and dashboard views can be configured by the Administrator.

Step 1 – Define Attributes

The screenshot shows two configuration panels. The top panel is titled 'Filters' and contains a table for defining filter rules. The bottom panel is titled 'Sorting' and contains a table for defining sort order and grouping.

Field To Evaluate	Operator	Value(s)	Relationship	Actions
1. [Field Selection]	[Operator]	[Value]	And	[X]
2. [Field Selection]	[Operator]	[Value]	And	[X]

Advanced Operator Logic: [Text Box] Example (1 AND 2) OR 3

Field	Order	Grouping	Actions
1. [Field Selection]	Ascending	Disabled	[X]
2. [Field Selection]	Ascending	Disabled	[X]

Step 2 – Configure Access

The screenshot shows the 'Advanced Search: AM Users' configuration page. It includes a search bar, a 'Fields To Display' section with a list of available fields, and sections for 'Filters' and 'Display Options'.

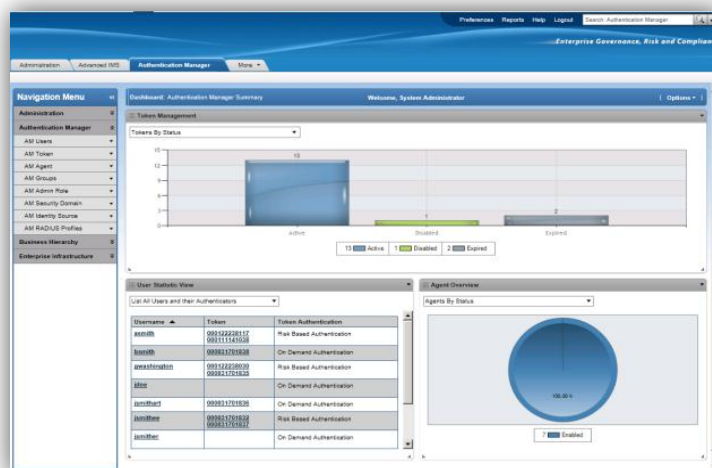

Available Fields:

- AM Users
- Add New Relationship
- Account Created Date
- Account Enabled?
- Account Expiration Date
- Account Locked Out Expiration Date
- Administrator
- AM Admin Role (AM Users)
- AM Agents

Selected Fields:

- AM Users
- Username
- Account Enabled?
- Email
- First Name
- Last Name

Step 3 – Configure Views
